

POLARES ANHÄNGEN

Anlage zu Aufgabe _____

gegeben: A ($y_a; x_a$) Anschlusspunkt
 S ($y_s; x_s$) Standpunkt
 gemessen: $\beta_i =$ _____
 $s_{i,ger} =$ _____
 $[s_{a,ger}] =$ _____

gesucht: $P_i (y_i; x_i)$ Objektpunkt
 Formeln: $y_i = y_s + \Delta y_{s,i} = y_s + \sin t_{s,i} \cdot s_{i,ger} \cdot m$
 $x_i = x_s + \Delta x_{s,i} = x_s + \cos t_{s,i} \cdot s_{i,ger} \cdot m$

Hinweis: Wenn s_a nicht gemessen wurde ist $m = 1$.

Punkt- nummer	y	x	R → P		$t_{s,i}$ = $t_{A,s} + \beta_i \pm 200$
	$\Delta y = y_s - y_a$ oder $\Delta y = y_i - y_a$	$\Delta x = x_s - x_a$ oder $\Delta x = x_i - x_a$	s_{ger} = $\sqrt{\Delta y^2 + \Delta x^2}$	$t_{A,s}$ = $\arctan \frac{\Delta y_{s,a}}{\Delta x_{s,a}}$	
	$\Delta y_{s,i} = \sin t_{s,i} \cdot s_{i,ger} \cdot m$	$\Delta x_{s,i} = \cos t_{s,i} \cdot s_{i,ger} \cdot m$			
(A) _____					
(S) _____			$s_a =$ _____		
(P _i) _____			$s_i =$ _____		
Probe:			$s_{a,i} =$ _____		

wenn $\beta_i < 200$ gon: $\cos \beta = \frac{s_{i,ger}^2 + s_{a,ger}^2 - s_{a,i}^2}{2 \cdot s_{i,ger} \cdot s_{a,ger}} =$ _____ $\beta_i =$ _____

wenn $\beta_i > 200$ gon: $\cos \gamma = \frac{s_{i,ger}^2 + s_{a,ger}^2 - s_{a,i}^2}{2 \cdot s_{i,ger} \cdot s_{a,ger}} =$ _____ $\gamma =$ _____

$\beta_i = 400 - \gamma =$ _____

$m = \frac{s_{a,ger}}{s_{a,ger}} =$ _____
